What does IMACS Mobile Connectivity provide to you ...?

INTELLITECH MOBILE ID provides in-the-field positive identification and historical incarceration record display.

INTELLITECH MOBILE ID interfacing with the Intellitech Remote Booking module provides agencies with the ability to pre-book inmates by completing the booking sheet with positive identification in the field.

INTELLITECH MOBILE ID uses forensic quality fingerprint scanners which capture high quality fingerprint images regardless of skin pigment or the presence of stains from ink, dyes, grease or dirt.

INTELLITECH'S MOBILE ID interfaces with the IMACS medical module to collect positive identification while distributing medications. The Medication Administration Reporting (MAR) will streamline the process of recording medication distribution. The system uses biometric identification to create automatic reporting and collect proof of delivery information.

INTELLITECH'S MOBILE ID will soon be deploying its e-CITATION, which will automate citation writing, providing wireless mobile communications.

The complete INTELLITECH MOBILE ID Solution Offers:

- In the Field Biometric ID
- In the Field Image Capture
- Biometric Inmate Headcount
- Magnetic Strip Card Reader
