Inmate Visitation

The IMACS visitation module records or schedules inmate social and professional visits. The institutional visitation schedule is built during the implementation project with the County's rules. All visitors are registered and assigned a unique identification, allowing the County to monitor which inmates a visitor has seen. It also allows the visitor to be sanctioned from visiting one or all inmates for which they are registered. Video visitation can also be added as a visit location providing an efficient way to interface with a Video Capture vendor.
